Chairman’s Message

At Indus Magna Resources, we are driven by a bold vision: to unlock Pakistan’s mineral wealth through sustainable, innovative, and inclusive resource development. As Chairman, I take great pride in leading a company that is deeply committed to national progress, technological excellence, and environmental responsibility.

With a strong foundation in geological expertise and strategic planning, our projects are rooted in regions rich with promise—copper, antimony, gold, silver, and other critical minerals that will power industries, technology, and future economies. We have secured significant mineral blocks in Chitral and are embarking on a complete, vertically integrated value chain—from exploration and mining to advanced processing, smelting, and refining.

Our approach is defined by:

- **Innovation and Efficiency:** Utilizing modern technologies such as modular flotation systems, green-energy smelting, and run-of-the-river micro-hydropower generation.
- **Sustainability**: Adhering to responsible mining practices that protect local ecosystems and communities.
- **Value Addition within Pakistan:** Maximizing in-country processing and refining to retain economic value and create skilled employment.
- **Investor Confidence:** Backed by transparency, financial discipline, and high-return potential, our model offers robust opportunities for global partners.

Indus Magna is not just a mining company—it is a forward-looking force contributing to Pakistan's industrial future. I invite you to join us on this journey of transformation, investment, and shared prosperity. We invite visionary investors to join us in developing Chitral's untapped potential. Together, we will set new standards in mineral excellence.

Sincerely,

Muhamnad Salahuddin
Chairman
Indus Magna Resources (Pvt) Ltd.

Message From CEO

Unlocking Chitral's Wealth, Powering Sustainable Growth

At Indus Magna, we're strategically positioned to capitalize on high-potential mineral assets within our exclusive 2,000-acre government-leased concession in Chitral. Our focus: commercially viable extraction of copper, antimony, lead, gold, and silver, alongside critical supporting infrastructure.

Key Investor Advantages:

- **Proven Resource Base:** Targeting high-demand minerals in a secured, large-scale concession.
- **Integrated Clean Energy:** Developing run-of-river micro-hydro plants to ensure low-cost, reliable power for operations.

Message From CEO

- **Sustainable Model:** Committed to local capacity-building through mining & plant operations training – empowering communities while securing our skilled workforce.
- **Our Execution Edge:** Agile development, disciplined resource optimization, and transparent partnerships.

We transform strategic assets into sustainable returns. Join us.

Syed Muhammad Arif Hussain
Chief Executive Officer (CEO)
Indus Magna Resources (Pvt) Ltd.

About Us

Website: www.indusmagna.com

Indus Magna Resources

Welcome to Indus Magna Resources (Pvt) Ltd, Pakistan’s rising force in mineral exploration, extraction, and processing. Located in the mineral-rich terrain of Mogh – Boisangol, Garam Chashma, Chitral, we hold over 2,000 acres of government-allocated land rich in copper, gold, silver, antimony, and lead. Through green, modern, and integrated operations, we transform raw ore into refined metals for global markets.

Our Vision

Indus Magna Resources envisions becoming Pakistan’s foremost sustainable mineral resource company, driving national progress and contributing to global industry by responsibly unlocking the mineral wealth of Chitral. We aim to set new standards in exploration, extraction, and processing—where innovation meets environmental stewardship and prosperity is shared across communities and generations.

Our Mission

Guided by a team of experts and a commitment to ESG principles, we strive to create lasting economic impact, ensure safety and transparency, empower local communities, and build trusted partnerships for a sustainable future.

Our mission is to responsibly explore, extract, and process high-value minerals from the rich terrains of Mogh – Boisangol, Garam Chashma, Chitral. Through integrated, modern, and environmentally conscious operations, we transform raw ore into refined metals that fuel industries worldwide.

Our Team

Meet our multi-disciplinary leadership, driving Indus Magna's success across geology, engineering, finance, and operations:

1. **Mr. Muhammad Salahuddin**
   – Director, CFO & Chairman
2. **Syed Muhammad Arif Hussain**
   – Chief Executive Officer & Director
3. **Mr. Muhammad Asim Shah Gillani** – Director
4. **Mr. Ishtiaq Ahmed** – Senior Geologist
5. **Mr. Syed Sarfaraz Naqvi** – Mining Engineer
6. **Mr. Fawad Bhatti** – Plant Engineer

Together, this core team brings over 50 years of combined expertise in mining and industrial operations.

Meet the Visionaries Behind Mission

Mr. Muhammad Salahuddin

– Director, CFO & Chairman

Syed Muhammad Arif Hussain

– Chief Executive Officer & Director

Mr. Muhammad Asim Shah Gillani

– Director

Muhammad Akbar Khan

- Executive Chairman

Our Projects

Strategically Located. Technically Sound. Resource-Rich

Copper-Gold-Silver Block – 1,000 Acres

- High-grade sulphide and oxide copper ore
- Proven gold and silver sedimentation
- On-site flotation, smelting, and refining planned
- Final product: 99.99% copper, bullion-grade gold & silver

Antimony Ore Block – 500 Acres

- Up to 30% Sb content in raw ore
- Will produce refined antimony ingots and antimony trioxide (Sb_2O_3)
- Targeting export to electronics, chemical, and battery sectors

Lead Ore Block – 500 Acres

- Under development for future lead smelting and processing
- Planned export of refined lead to industrial buyers

Investor Relations

Invest in Pakistan’s Next Mineral Powerhouse

We are now open for:

- Equity and Joint Venture Investment
- Long-term Mineral Offtake Contracts
- Strategic Technology Partnerships
- Export Distribution Alliances

Why Invest?

- Access to 2,000 acres of verified mineral land
- Vertically integrated: From mining to refining
- Strong team of engineers, geologists & financial experts
- Early entry into undervalued but high-potential assets
- Built-in ESG and green mining framework

Sustainability

Strategically Located. Technically Sound. Resource-Rich

We believe mining should not come at the cost of the environment. Our vision includes:

- Run-of-the-river micro-hydro power
- Zero-discharge water recycling
- Low-dust ore handling systems
- Responsible tailings management
- Support for local jobs and training

Indus Magna is committed to becoming one of Pakistan’s first green mining enterprises, where environmental responsibility and commercial success go hand-in-hand.

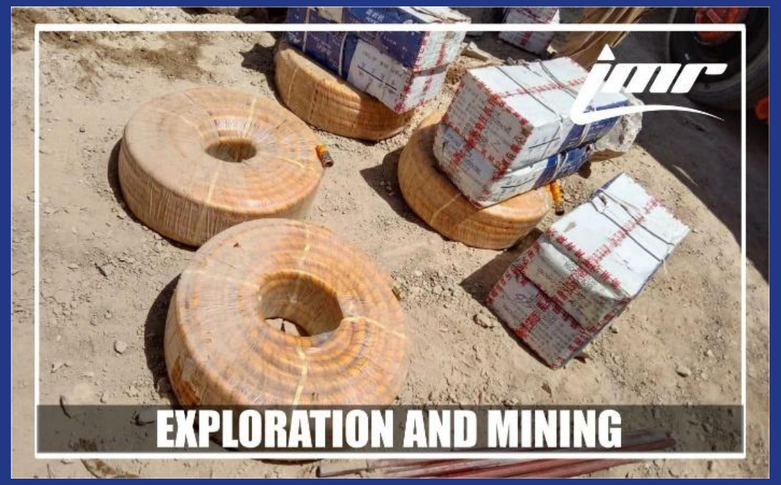
Exploration and Mining

Email: ceo@indusmagna.com
Website: www.indusmagna.com

Exploration and Mining

Our mining operations focus on extracting copper, antimony, and other valuable minerals using modern techniques with minimal environmental impact. Our exploration team continually assesses new reserves using advanced geological surveying methods.

Exploration & Mining



Grinding Mill

Grinding Mill at mine site; for a polymetallic mine processing Cu, Sb, and Pb ores, a closed-circuit ball mill with hydro cyclones offers the best balance of flexibility and efficiency.

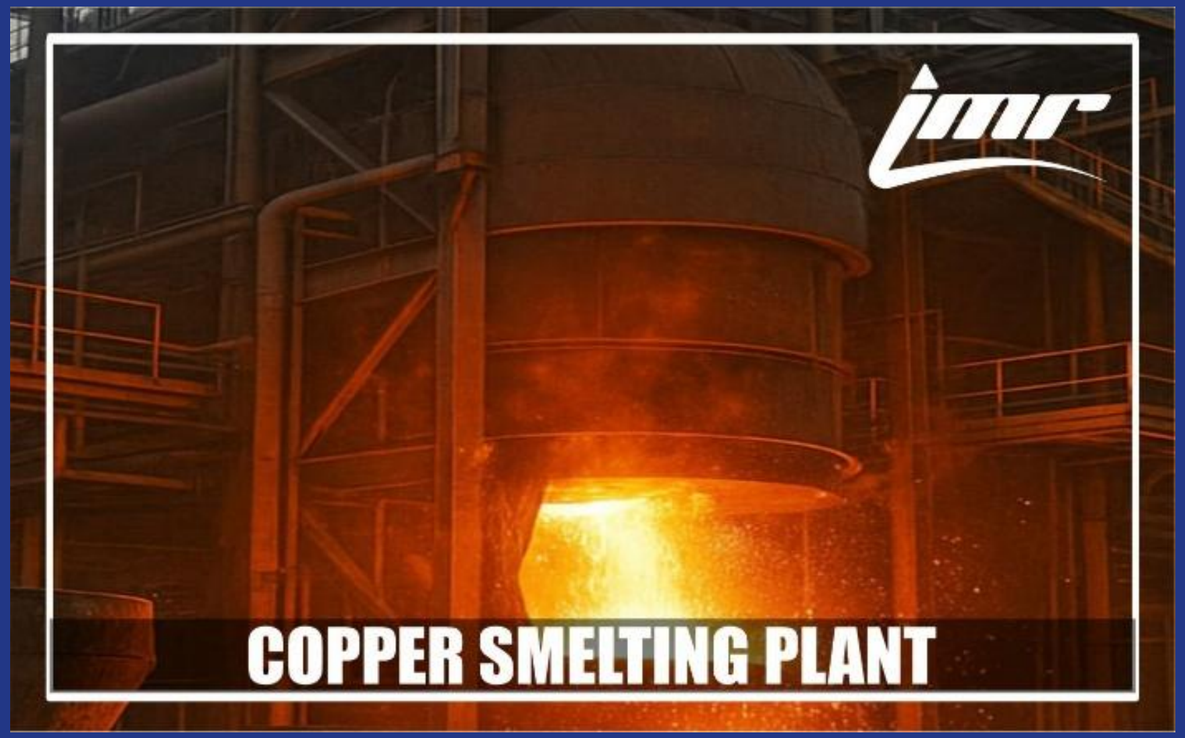
Prioritize: 1. Rubber/composite liners for corrosion resistance. 2. VFD drives to adjust speed for ore variability. 3. Advanced dust capture for toxic metals. Always conduct ore-specific grindability tests (Bond, SPI) before final mill selection.

Copper Flotation Plant

Our state-of-the-art flotation plant utilizes advanced technology to separate valuable minerals from ore. With a capacity of 1,000 tons per day, we achieve industry-leading recovery rates while maintaining strict environmental controls.

Copper Smelting Plant

After getting copper concentrate from Copper Flotation plant smelting of concentrate into Furnace and then electrolysis makes 99.995% pure copper ingots.



Antimony Roasting Plant

An Antimony Roasting Plant is a facility dedicated to thermally oxidizing antimony sulfide(sibnite) concentrates. Its primary goals are to remove sulfur, volatilize and separate antimony as an oxide (either for direct sale or as feed for metal production), and manage impurities and emissions through sophisticated gas cleaning and environmental control systems. It's a critical step in the primary production pathway for antimony metal and trioxide.

Lead Smelting Plant

Lead Smelting Plant is an industrial facility designed to extract metallic lead (Pb) from lead-bearing ores (primarily galena, PbS) through pyrometallurgical processes. Its core function is to reduce lead compounds into molten lead bullion while separating impurities into slag or off-gas streams.

Gold Refinery

Small-Scale Mine Gold Refinery: An on-site processing unit designed to extract and refine gold from copper-gold ores (15–18 g Au/ton) using compact, low-capacity methods. It bypasses centralized refineries, enabling direct dore bar production at the mine while minimizing transport costs and security risks.

Laboratory

Small laboratory at a mine site, optimized for rapid decision-making, process control, and gold/copper ore analysis. Core Purpose of a Mine-Site Lab including Rapid grade verification (ore control, stockpile management), Process monitoring (tailings assays, recovery calculations), Metallurgical testing (optimizing crushing/grinding/leaching) and Environmental compliance (effluent testing). Why On-Site Labs Pay Off: Cut assay turnaround from 5 days (off-site lab) to 8 hours and to Reduce processing of sub-grade ore (saves $100s/ton).

Run-of-the-River (RoR) Micro Hydro Plant

Small-scale hydropower system (typically 5kW–1MW capacity) that generates electricity by harnessing the natural flow and elevation drop (head) of a river without large dams or reservoirs. Water is diverted through a turbine and returned to the river downstream, minimizing environmental disruption. Efficiency: Modern turbines: 75–90%, System losses (penstock friction, silt): 10–25%.

Advantages for Remote Mines, 24/7 Power: Uninterrupted operation vs. diesel generators, Low OpEx: No fuel costs; minimal maintenance, Resilience: Withstands extreme weather if designed properly, Eco-Friendly: Zero emissions; preserves river.

Community Services

We are committed to uplifting local communities through essential services, including a Masjid and a fully integrated technical school. The school offers education from primary to secondary levels, with a strong focus on vocational training in mining, plant operations, and related technical fields—empowering the next generation with practical skills and sustainable career opportunities.

Our Products

Website: www.indusmagna.com

Our Products

Minerals offered by Indus Magna Resources (Pvt) Ltd. for Trading are including Copper ore, Antimony ore, Lead ore, Zinc ore, Iron ore, Bauxite (Aluminum ore), Silica Quartz, Fluorite ore, Chromite ore, Barite ore, Gold ore, Silver ore, Mercury ore, Graphite ore, Soap Stone, Egg White Marble, Green Granite, Black Granite. Rare Earth Metals/Elements (Lithium, Rubidium, Titanium, Zirconium, Molybdenum). Precious Stones (Ruby and Saphire) and Semi Precious Stones (Aquamarine, Topaz, Garnet amd Nephrite).
